INFLATABLE DOCK SEAL

INFLATABLE DOCK SEAL

The Air Frame Inflatable Shelter is a versatile and adaptable element barrier designed to seal gaps while allowing in light. It is suitable for door openings up to 3048mm wide x 3200mm high and can seal a wide range of trailer heights from 3660mm to 4115mm high and 2440mm to 2600mm wide.

The shelter features two vertical air bags to seal the sides of the trailer and an inflatable header air bag to seal the top, providing full unrestricted access to the rear of the trailer. It inflates after the trailer has docked and deflates before departure to minimize wear and tear. The system is powered by a 240V ½ HP continuous running motor and blower assembly.

FEATURES:

- Two replaceable bottom draft flaps
- 1/2HP blower motor
- Double-stitching on all seams
- Wide range of durable fabrics to choose from

APPLICATIONS

- Climate-controlled operations such as frozen food, groceries, and pharmaceuticals

PRODUCT FEATURES:

A Raked head frame diverts water to sides

B Galvanized trim angle will not rust

C Replaceable draft flap seals bottom gap between trailer and building wall

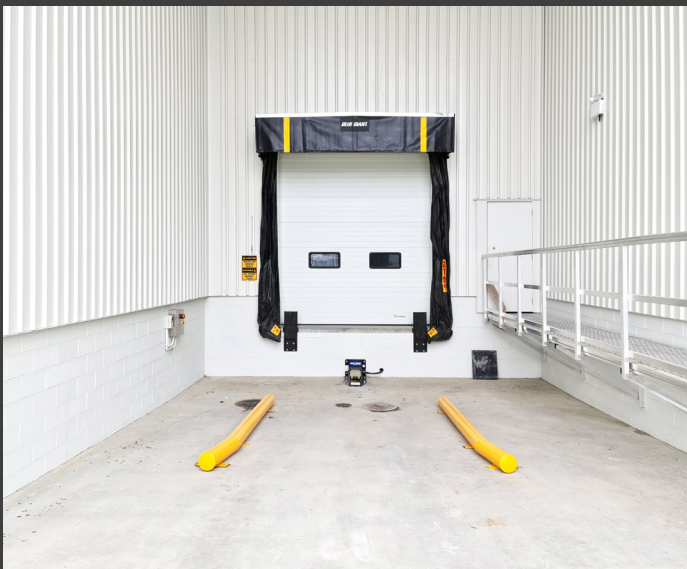

D 24" (610 mm) yellow guide stripes for accurate truck placement

E Translucent polyethylene sheeting on head frame allows light into dock area

F Galvanized trim angle will not rust

G "STOP" logo on side air bag to prevent trailer from entering dock area if bag is accidentally left inflated
